The system was proposed not as a prognostic measure, but rather as a stratification tool to resolve the inherent heterogeneity of septic patients. The illness severity of the enrollment cohort was significantly different in every study, and the in-hospital mortality ranged from 4.

The relative weight of each component of PIRO was calculated. Sepsis Management: PIRO and MODS you sure you would like to remove these items from your wishlist? Crit Care Med Recruitment would be restricted to those patients having ventilator-associated pneumonia insult and we might further restrict entry to patients with a particular response fever, hypoxia, or laboratory findings such as leukocytosis or elevation of procalcitonin or TREM-1 levels that resulted in a sicker group of patients who were both more likely to actually have pneumonia, and more likely to experience an adverse outcome from that disease.
